Certified Company  
GMP Certified Unit

Cosmic Cartons is instrumental in the manufacturing and supplying of a wide assortment of Packaging Boxes & Cartons Since its commencement in 2016. To ensure precision in the designs, latest technology along with advanced machines is being utilized. it started as a manufacturer of lightweight corrugated boxes. Shortly thereafter, its design talents and package engineering experience were called upon for heavy-duty applications. The company has state of the art machinery to manufacture high-quality products and deliver excellent value to customers while operating in a manner that maintains the integrity of the environment.

Leveraging on our competitive prices, in-depth product knowledge, and long industry-presence we have garnered huge client base. As a customer focussed organization, we manufacture all our products to meet the desired quality, durability, functional and safety standards. The plant has all types of flute rollers required by the industry. We maintain optimum level of both imported and indigenous stock of Kraft paper for our customers. we are also completely equipped to test the product at various stages of its manufacture. We have enclosed a separate list of testing equipment available with us for this purpose.

# DIFFERENT TYPES FLUTES IN CORRUGATED BOXES

## Different Corrugated boxes

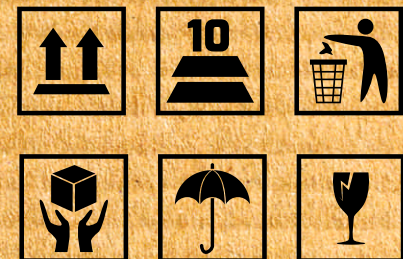

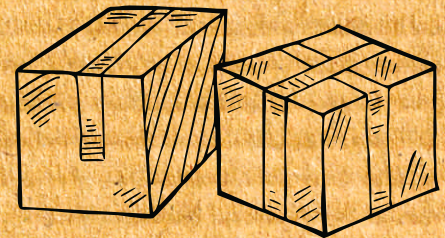

We offer a range of boxes that can effectively meet the diverse needs of varied industries. We are the top manufacturer and supplier of packing boxes.

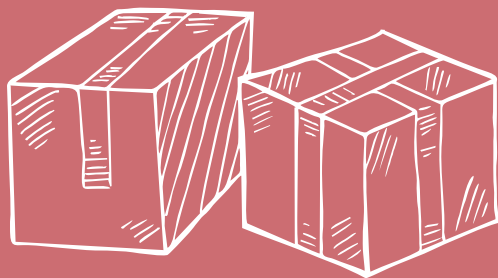

For thousands of years, architects have known that an arch with a proper curve is the best and strongest way to span any given space. When corrugated boxes began to be manufactured, they used these same principles to the paper medium. These arches, which are commonly referred to as flutes, are adhered to the outer sheets (liner board) with a starch based adhesive and are resistant to bending and pressure from all directions. The "Flute" describes the structure of the wave shaped cardboard material that makes up a board's corrugation. Flutes come in several sizes, known as flute profiles. The standard profiles range from A-flute (the largest) to F-flute and below (micro flutes). Flutes determine the different thicks and thins of corrugated as well as strengths. Flutes are typically measured by A, B, C, & E . The flutes are sandwiched between the liner board's. As you can see from the illustration the flutes are thickest at grade A.

## Superior Infrastructure

We ensure meeting your diverse needs with the best infrastructure, superior manufacturing units, and the most current technology.

## Understand your customers

The first step is to understand your customers. Once you have a good understanding of what they want, it's easier to design something that meets their needs. Corrugating your packaging can help you reach a wider audience and connect with them on a more personal level. Additionally, perforations and natural dyes will help you show your support for the company culture and values. By incorporating these features into your packaging, you'll create an inviting and stylish package that everyone will want to own.

## Use perforations, natural dyes, and recycled materials

One way to use perforations, natural dyes, and recycled materials in your packaging is to add them into the design of the box, bag, or can. This will allow you to create a more unique and innovative look for your products. You can also use perforations to create openings in the packaging so that customers can directly access the contents. Additionally, you can use natural dyes to give your products a more vibrant and desired color. By using these techniques, you will be able to create different packaging options that are both unique and stylish.

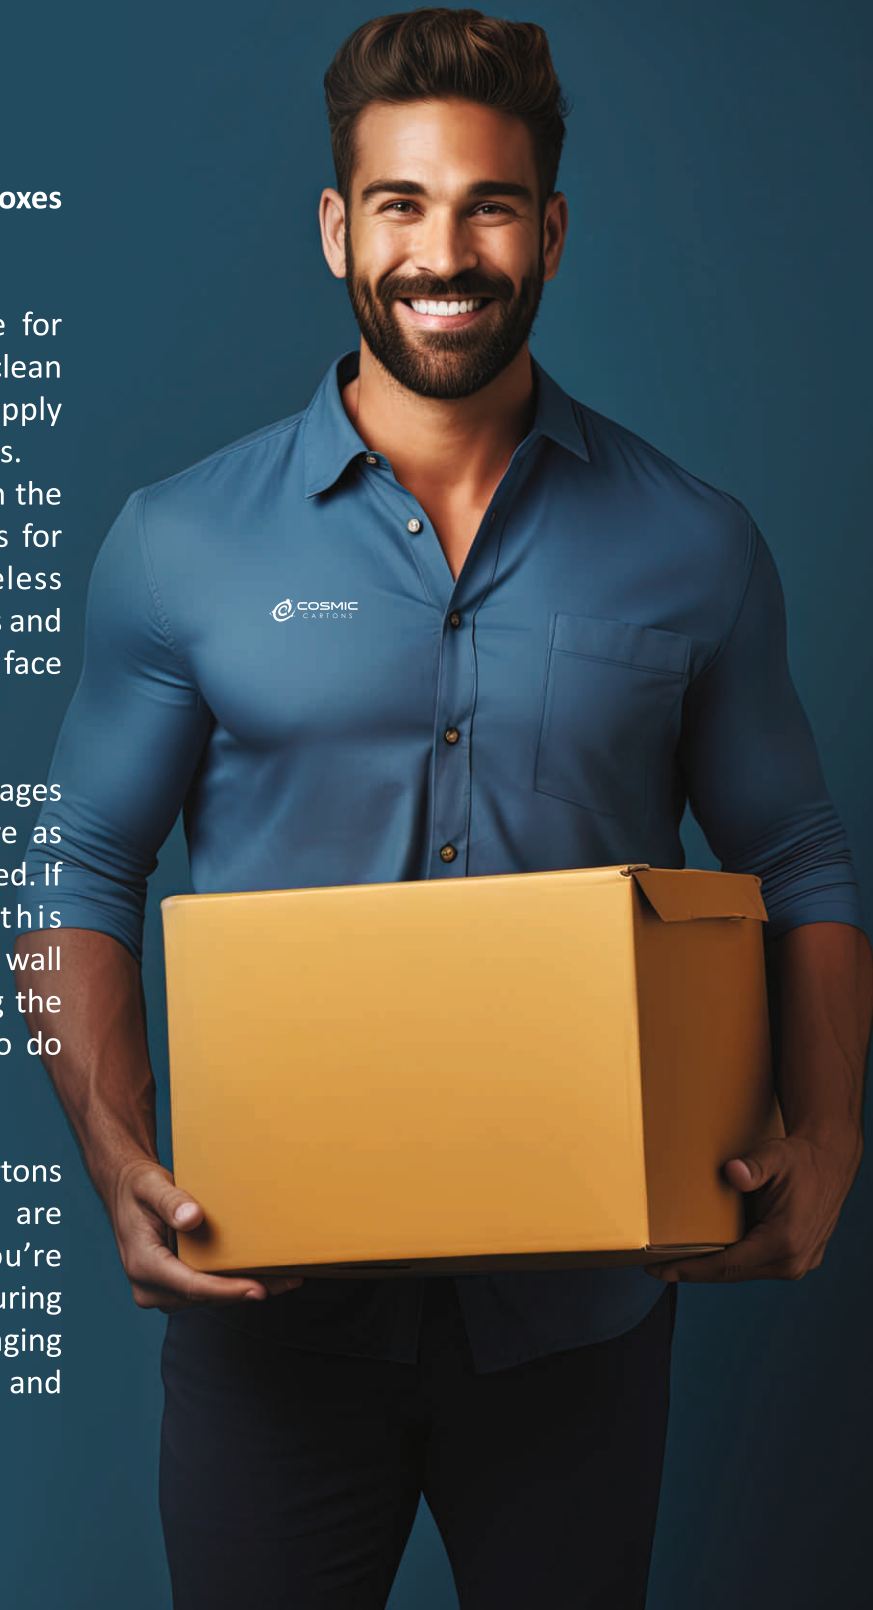

## **Prevent Product Damage with Corrugated Boxes during Transit**

Corrugated packaging is an excellent choice for packaging small or big items, it is a green and clean option that gives value throughout the supply chain, take care of the products and boosts sales. Whether your item is being delivered through the city or worldwide, there are various chances for your shipment to be harmed. From careless handlers to water dangers, to crushed bundles and unstable transportation stacks, your packages face an extensive variety of harming conditions.

In any case, your client's wants these packages should rise up out of the delivery procedure as flawless and superb as the day they were packed. If you are not sure how to deal with this accomplishment? Testing your containers for wall support, utilizing the correct pallet and using the best box stacking systems can enable you to do everything conceivable to secure your item.

Still, confuse? Talk to the experts at Cosmic Cartons to guarantee your transportation partners are protected, faithful and dependable. If you're worried about the protection of your goods during transit, contact us today for safe transit packaging and to learn more about all of our products and services.

Every customer will look into the packaging first and which will decide your brand. Therefore you have to make sure that you are paying utmost attention to the packaging. We keep a consistency in our production to maintain the product quality. We make sure that we can meet the different demands of our valued customers by offering timely delivery of the best quality products. We also keep a very easy payment method and a customized solution to make sure that everyone coming to us acquires their desired products.

With our ethical business process along with the knowledgeable manpower that we have we make sure to achieve the different business goals without facing any hurdles. So for any type of packaging solution and for any industry, you can rely on our working professionals and the technology that can create accurate packaging solutions for your needs. We have always worked with the only agenda to offer quality and deliver on time. So all you need is to reach us today and let us know your requirements so that we can start working for your project.
